

The Beer Line Cleaning system provides semi-automatic cleaning of beer and other beverage lines, assuring consistent and high quality cleanliness for best beverage quality.

Cleaning process is executed by the customer easily thanks to the user-friendly working mode. Return on investment is improved when controlling 6 beer lines with the same Econo running the cleaning.

Features

- semi-automatic chemical cleaning system for any number of beverage and beer lines
- for cleaning put the keg heads onto the adapters, open water taps and make sure, that cleaning solution will be drained - press start button
- quantity of water and cleaning product controlled by flow meters
- Econo controls all valves to be cleaned in a Cascade 3 network
- 31 different cleaning cycles can be pre-programmed
- report of cleaning cycles printed or displayed by Econo
- cleaning intervals can be programmed. This can be used to alert the customer or to lock the beer lines when not executed properly to assure best beer quality
- the system uses the proven *Dosatron* pump, approved by many breweries for this application
- Econo can control additional 6 valves for portioning or counting

On demand, a fully automatic cleaning system is available using automatic keg heads.
